

Z1 Motorsports Akebono 14" BBK Wheel Template - Fronts

Use this template to measure fitment of the Z1Motorsports Akebono BBK in your wheels.

1. Print this PDF in a 100% scale. Use a ruler or set of calipers to check the 1:1 rule square on the right to ensure proper fitment. Scale your print properties if needed.
2. Cut as indicated along the solid line tracing the profile. Tracing and then cutting along a cardstock or cardboard is recommended.
3. Remove the wheel to be tested. Using the included annotations, insert the hub centric portion of the template into the corresponding center of the wheel and spin a sweep about the inside of the wheel. The template should NOT contact the wheel at any point, and it is recommended that a two millimeter clearance be considered to ensure proper fitment.

Use the above rule square to check for a 1:1 scaled print.
