SECTION 2 - VEHICLE PREPARATION

- 2.1) Prepare Handle to install on DS (Drivers Side) truck bed utility track
 - a) Open tailgate
 - b) Place handle in extended up position hold base (pull handle forward from base (Position # 1) and rotate upwards (Position # 2), allow handle to drop in locked position.

- 2.2) Prepare base to attach to utility track
 - a) Unscrew knob on right side till it stops and push knob toward body
 -) Check that the Locking tab is extended.

- 2.3) Position on Utility Track
 - a) Open tailgate
 - b) Insert handle body into utility track with handle pointed to rear of vehicle (toward the tailgate).
 - c) Rotate handle body 90 degrees upward so the handle is in deployed position # 2 and hold in position.

- 2.4) Lock base into place on the utility track
 - a) Hold handle body so the locating tabs (F) lock into the utility track notches.
 - b) Tighten handle retaining knob while holding the handle assembly in position # 2. See 2.5

SECTION 2 - VEHICLE PREPARATION

- 2.5) Lock Body into Utility Track
 - a) Hold tab into the notches in utility track and tighten knob to lock into the track.
 - b) Tighten knob until lock washer is flatten against body
 - Cycle handle by pulling up and moving the handle toward cab, letting the handle move rearward to lock.
 Let handle spring pull handle into locking position.
 - d) Reverse operation to deploy handle for use.

- MAXIMUM Weight Limit is 300 LBS. (136 Kg.)
- Handle knob should be checked periodically and kept tightened.
- Do not Use handle as a tie down or hang anything from it on any position.
